

When accessing a meeting, if a participant clicks on a link in email and they have an app on their computer or browser plugin and are not logged in, they will see the following message (screen capture is from Chrome plugin):

In this situation, click on the leave button or the X, and then click on the Sign in with SSO option:

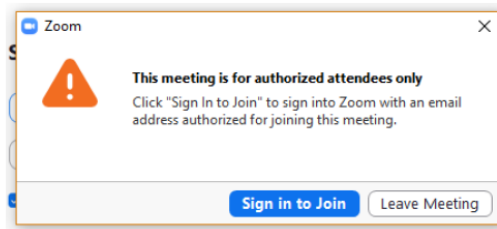

Enter Wentworth as the domain:

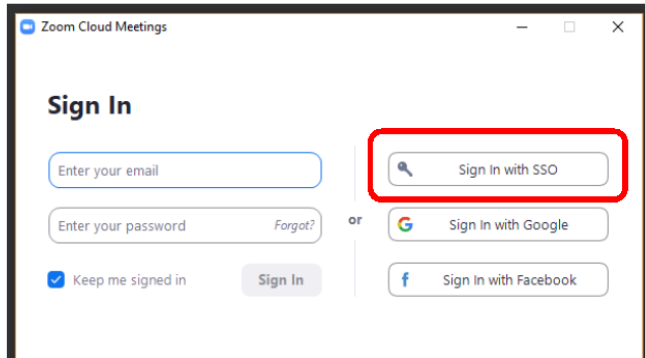

You will be taken to the Single Sign On page for Wentworth to complete your sign on and returned to the plugin/app.

When using the desktop app, you will follow the same steps. We recommend the desktop app because you can sign in and stay logged in. This is the app that you are prompted to download and install when you click on the link to enter a meeting.

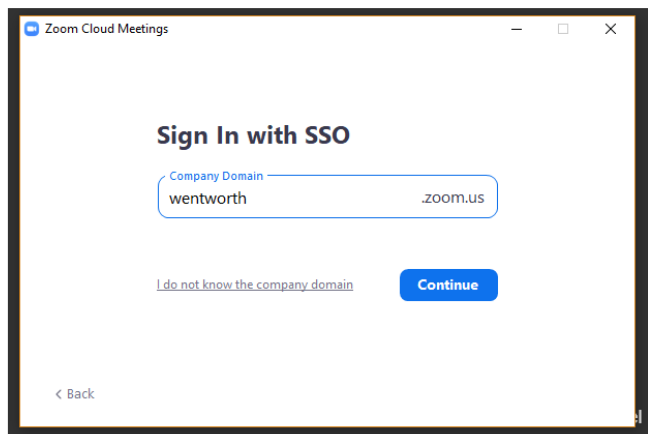

In the desktop app the message is a bit clearer:

Use the Sign in with SSO button:

Enter Wentworth as the Company Domain:

Log in to Wentworth's Single Sign On page and return to the app.
