

WE ARE
GROWING
CONNECTED
VISIONARY
PIONEERS

WENTWORTH INSTITUTE OF TECHNOLOGY

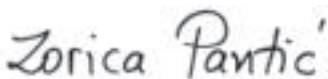

WE ARE PIONEERS

Each year at Wentworth, we graduate pioneers. They are men and women with ideas for transformative change and a passion for exploring new ways of thinking. They go on to become leaders of industry, business owners, and entrepreneurs who define the future of their chosen field and our global economy.

The ability to break new ground is a characteristic shared by the entire Wentworth community. Our faculty is dedicated to creating new ways to reach students and promote our educational goals. Our staff is constantly introducing new initiatives and programs that advance the mission of the Institute in myriad ways. Our alumni and industry partners are challenging us to extend our learning opportunities beyond the classroom.

This pioneering culture has manifested itself in three distinct ways: growth, connections, and vision. Each of these areas has played a role in advancing our greater mission—building a better future for the entire Wentworth community.

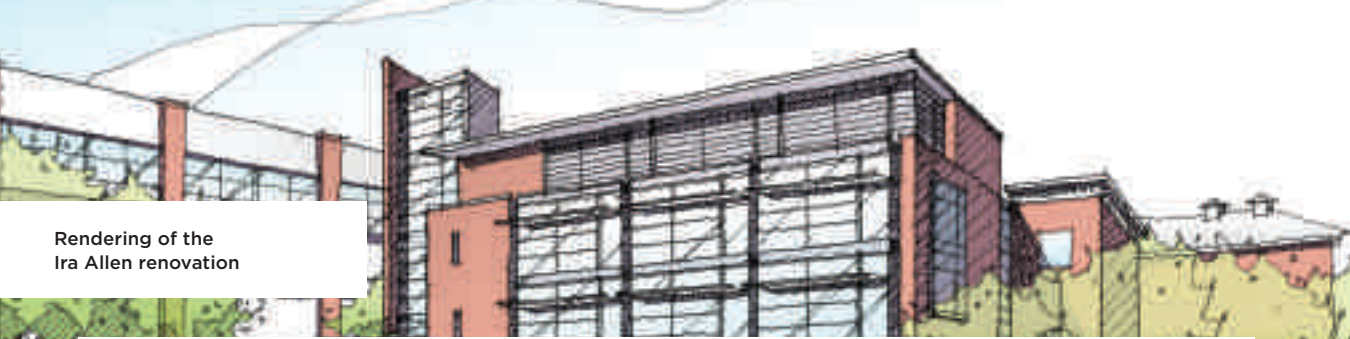

Sincerely,

Zorica Pantić, EE, Ph.D.

Ira Allen renovation

PIONEERING: GROWTH

As Wentworth continues to advance, we maintain a focus not simply on expansion, but also on growing in ways that reflect insight into the needs of our students, faculty, and partners in industry.

28

students are enrolled in the Master of Science in Construction Management's inaugural class.

The Institute began offering a **Master of Science in Construction Management**, giving construction professionals the opportunity to learn management principles that will help them advance in their careers. The new program is administered through Wentworth's **College of Professional and Continuing**

Education (formerly The Arioch Center @ Wentworth). The college is likewise focused on market-driven program development under the leadership of its new dean, **Larry Carr**. Wentworth also graduated its first **Master of Architecture** class this summer, with recipients of the Institute's highest academic degree honored with an elaborate hooding ceremony. In an effort to serve the digital learning needs of the new generation of students, the Institute has also greatly expanded its education model to include the flexibility of hybrid (which includes both online and in-person instruction) and online courses. Wentworth

84

graduates received the new Master of Architecture degree in its inaugural class.

also created six new faculty positions, introducing educators whose backgrounds include everything from chemistry to computer science.

The growth of the Institute and the changing needs of industry have increased demand for updates to Wentworth's facilities and infrastructure. The second floor of **Kingman Hall** was refurbished, transforming an underutilized space into two classrooms and 13 offices for faculty. Similarly, renovations to the **Annex South** created office and study room space for the new construction management master's program. The

When it is completed, the addition to Ira Allen will be the first true new academic construction on campus since

1972.

the renovation of **Beatty Hall**, which will include the **Flanagan Campus Center**. Both projects are due to break ground in summer 2011.

This year,

118

hybrid and

25

online courses were offered.

PIONEERING: CONNECTIONS

Propelling the Institute forward is a group effort, reliant on strong relationships and effective interactions. The progress of the Institute was aided immensely by both the formation of new connections and the reinforcement of existing ties.

The Division of Technology Services utilized strong peer relationships among our educators to implement a faculty mentor program. This new initiative

11

faculty volunteers served as faculty mentors.

allows faculty looking to more effectively leverage technology—with online courses or interactive teaching methods, for example—to receive assistance from their fellow faculty members. The Office of Institutional Advancement similarly began to rethink their engagement model. Their

introduction of instructive alumni events allowed graduates to network while earning continuing education credits, which help them attain or maintain their licensing as well as advance their careers.

Wentworth has also worked hard to create new ways to keep our students

25%

of the student population participated in alcohol-free programming.

connected to campus. The new **Weekends @ WIT program** saw the launch of campus events that offered students healthy alternatives for recreation through engaging activities and alcohol-free programming.

Special Interest Housing, an innovative residential program for freshmen, gave students the chance to choose their living arrangements based on one of four interests: wellness living; leadership and life; women in technology; and video games and the arts. By allowing freshmen to bond with like-minded members of their class, this program can ease the transition to college life and ensure that students are integrated into the Wentworth community.

The Institute's ongoing effort to connect students to real-world, interdisciplinary work environments took a step forward as students in architecture, construction management, and civil engineering technology worked at the **Arcosanti** urban laboratory in Arizona for Spring 2010 co-op. The focus on learning across disciplines saw the students practice everything from greenhouse design to welding.

22

students traveled to Arcosanti, an experimental town that focuses on sustainability and experimental building techniques.

Arcosanti

Alyssa Tsoutsouras, BINT '11

PIONEERING: VISION

Wentworth has seen a great number of intuitive innovations from faculty, students, and alumni alike.

"Train the Trainer"

Computer science professors **Pierre Arthur Elysee** and **Magdy Ellabidy** observed the enormous suffering caused by poor infrastructure in the wake of Haiti's

39

Haitian nationals were taught under the "Train the Trainer" program.

January 2010 earthquake and decided to help in a way that could aid the island nation for generations. Their "**Train the Trainer**" program brought Haitian nationals to the Wentworth campus for instruction in project management and construction management by Wentworth professors and industry professionals. After returning to Haiti, participants will lead training for other members of their communities in order to boost rebuilding efforts.

The vision of our students shone as well. **Alyssa Tsoutsouras, BINT '11**, had a clear image of a loft in Boston filled with nautical elements that won her a prestigious \$30,000 scholarship from the Angelo Donghia Foundation. She is the first Wentworth student ever to win the prize.

Tsoutsouras was one of only

12

students from across the country to win the Donghia Foundation scholarship.

Jack Smith, IE '58, is setting an extraordinary example with his gift of \$500,000—and his promise of another \$500,000 if the number of donors to Wentworth is increased by 10 percent. His gift and his vision have not only advanced our mission but have also helped the Institute create a new way

to give. Through his challenge to his fellow alumni, a gift to Wentworth—no matter the size—can have twice the impact.

SUMMARY OF FINANCIAL RESULTS

(As of June 30, 2010)

OPERATING	2010	2009	2008	2007	2006
REVENUES					
Student tuition and fees	80,260,109	74,145,362	68,695,561	62,670,310	59,025,569
